

## GAL – Grosch Auto Loader

Automate your wear test machine

The Altracon GAL is a stationary loading unit, which extends the LAT100\* GROSCH wear testing system. It is supplementary mounted to the machine and allows **fully automated operation of the wear tests.**

The GAL loads and unloads the LAT100 with samples, taken from a magazine located on top of the machine by use of a loading arm. The GAL control system communicates with the LAT100 control system and the companies test management system, which i.e. provides the information which sample to load and receives a log-file with the processing information. The GAL handles in addition the automatic cleaning of the sample and its weighing after the test.

*\*) LAT 100 is manufactured by VMI.*
